

Online Reporting Tool

Adaptable tool providing access and insights for making more informed decisions

AEBRx powered by Magellan Rx Management leverages insights and innovation to deliver valuable solutions to our customers.

MRx View is a comprehensive, online reporting tool that provides on-demand access to sophisticated reporting capabilities. This multi-dimensional framework is secure, easy-to-use and intuitive, offering users the ability to effortlessly customize reporting output. With MRx View, users are given access to their daily claims data and have the unique ability to organize and display it in a way that makes sense for their business.

Advantages Over Other PBM Reporting

- Secure, on-demand access to daily pharmacy data
- Intuitive, easy-to-navigate interface
- Customizable views and filter options
- Flexible and real-time reporting output
- Scenario capabilities to determine impact
- Available to all groups, regardless of size

Opioid Report

The MRx View Opioid Report uses a proprietary risk score to identify potential problem members with unusual or excessive utilization patterns. For example, members who have utilized multiple pharmacies and multiple prescribers to accumulate controlled substances exhibit a pattern that might suggest potential for abuse of opioid medications.

Our opioid risk score is based on several factors, including:

- Opioid claims
- Doctors who prescribed the opioids
- Pharmacies that dispensed the opioids
- Combination medication claims that could enhance the euphoric effect of opioids or increase the probability of overdose. These include antianxiety, muscle relaxers, hypnotics, antidepressants, and antipsychotics
- Cancer medications (which, when present, typically mean the utilizer is not abusing)

Adherence Report

Taking medications exactly as prescribed (improving adherence) is one of the most important things members can do to enhance their health and prevent medical complications. The MRx View Adherence Report identifies members within certain therapy classes that are not taking their medications as directed. Early identification and successful interventions are key to medication adherence.

MRx View currently tracks adherence in five therapy classes:

- Cardiovascular – Hypertension (Lisinopril, Amlodipine, Losartan, Metoprolol, Atenolol)
- Cardiovascular – Other (Caduet)
- Diabetes (Metformin, Glimepiride, Januvia, Glipizide, Invokana)
- Dyslipidemia (Atorvastatin, Simvastatin, Pravastatin, Crestor, Vytorin)
- HIV/AIDS (Truvada, Genvoya, Atripla, Triumeq, Viread)

Create New Report

RxMonitor

RxMonitor allows users to create custom red-flag situations and automatically receive emails when those conditions are met with the frequency they specify. For example, users might wish to be alerted when:

- Any drug over \$100 per day is filled
- Any drug over \$1,000 per script is filled
- Any new prescription is filled for Harvoni
- Any narcotic is refilled more than twice
